

## Protect Patient Confidentiality

Deliver Private Health Information to your patients using the patented SecuReach<sup>®</sup> communication software system. Actively engage your patients using our automated technology that makes telephone calls and delivers timely email and text reminders for you.

Sending HIPAA compliant, password protected telephone messages is the core operating feature of the SecuReach<sup>®</sup> communication software system. Securely notify patients about private health information. Encourage your patient to book a specific follow up appointment or provide your patient with specific information regarding their diagnostic test.

Place the SecuReach communication software system into your patient communication work flow and watch the results pay back immediately in saved "phone tag" time and lost revenue for patients that are not compliant with their medical care follow up.

With Secure Messaging Capabilities, your patients can retrieve messages from you on their own schedule 24 hours a day, 7 days a week. Watch your patient satisfaction improve.

SECURE

Cloud Based

"SecuReach® has revolutionized my office. My staff loves that patients call less frequently with questions, patients love the ease of use and I love being able to not only follow up on testing, but also the improved efficiency of my time. Prior to SecuReach, I was always playing phone tag and taking a lot of time repeating myself with explanations to different patients about their abnormal paps, for example. Now, with a click of a button, I have all the same information available for my patients and it has saved me so much time. I have fewer questions about their testing, and they just call and schedule what they need. My patients also have peace of mind about all their test results, including the normal ones! SecuReach is so easy for me to use and has saved me a lot of valuable time".

-Sandhia Varyani, MD
